

Introduction

Welcome! If you are reading this page you are probably interested in writing software that uses the **Zermelo API**. If not, you probably want to visit the [main Zermelo site](#).

The API is the core of Zermelo 3 and of the vision of Zermelo to improve the ease of sharing information. It is a JSON REST API. In order to access the API you need an *endpoint* and an *access token*. Both will have to be provided by the customer/user himself. If you're affiliated with a school it is usually possible to use that portal for testing. Otherwise Zermelo may be able to provide you with a Zermelo Portal account.

An example endpoint would be: "<https://somenam.zportal.nl/api>" while an example token is: "a4pp9gg34g3u89p5qd96samrok".

When you use the endpoint you need to append the version you are using. The current API version is **v3**. For information about API versions check out [API Versions & Changelog](#).

If you want to retrieve as schedule first read [General API Information](#). and then take a look at [Retrieving the schedule with Curl](#). For detailed information you can consult [Appointment](#). Also make sure to read [Making your Zermelo API project a success](#). If you want to know how to use our software you can consult the [Handleiding](#) (in Dutch). We hope that we'll be able to add your project to [Projects using the API](#) soon!

If you have any questions or comments please don't hesitate to contact us at info@zermelo.nl.
